

## NMS Medicines List - Pharmacy staff guide

Please ensure you have familiarised yourselves with the new categories of drugs that have been added to the NMS as part of the NMS expansion scheme from September 2021. Some of these medications have multiple uses. The pharmacist will discuss with the patient regarding what they are using it for.

Epilepsy

The following are the most common drugs for osteoporosis that you will see being highlighted by the PMR:

The following are the most common drugs for Epilepsy that you will seeing in community pharmacy.

Carbamazepine Clobazam Clonazepam Ethosuximide Lacosamide Lamotrigine Levetiracetam Oxcarbazepine Phenobarbital Phenytoin Primidone Topiramate Zonisamide
